

الهيكل التنظيمي لكلية علوم وهندسة الحاسب

College Mission:

To provide students with high-quality education in computer science and engineering with knowledge, skills and abilities that equips them for professional careers, lifelong learning and allows them to serve society in a professional capacity.

College Goals

- Achieving excellence and high quality in education in order to develop the competitive ability and the skills of students in the labor market.
- Developing the staff member's capabilities of the college to future excellence in the fields of education and scientific research.
- Producing innovative procedure that meets the needs of the labor market.
- Promoting community service.

Program Mission:

The goal of BS SWE program has been, and continues to be, a high-quality degree program in Software Engineering that prepares students for lifelong learning as they undertake professional careers in computing. The program prepares students to work as requirements engineer, software architect, software design engineer, software quality engineer, software developer, software test engineer, or software engineering project manager.

The program prepares students to work as requirements engineer, software architect, software design engineer, software quality engineer, software developer, software test engineer, or software engineering project manager.

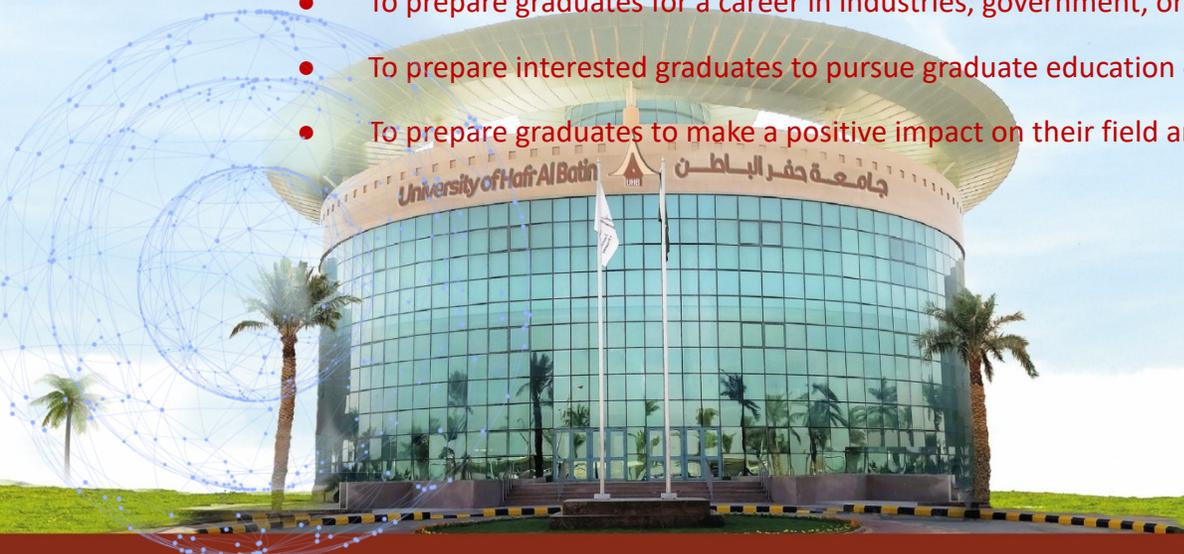

Program Goals:

The BS in SWE program has been formulated so that graduates will be able to:

- Effectively analyze, design, and develop high-quality software systems using appropriate theory, principles, tools, and processes.
- Solve problems in a team environment and effectively communicate with their peers, customers, and supervisors.
- Apply engineering processes and practices to software components and systems and demonstrate professionalism in their work; and
- Contribute to the growth of their employers, communities, and professional societies through lifelong learning and behave ethically and responsibly.

The BS in SWEN program has been formulated so that graduates will be able to:

- To prepare graduates for a career in industries, government, or academia.
- To prepare interested graduates to pursue graduate education or other professional degrees.
- To prepare graduates to make a positive impact on their field and society.
